

Charter Communications

Beginning in 1993 as a small company whose only product was analog video, Charter Communications, Inc. has evolved to a Fortune 500 company on the cutting edge of advanced broadband entertainment and communications for the home. Serving markets in 37 states, Charter employs a state-of-the-art network offering such services as Charter Digital™, Charter DVR™, Charter HDTV™, Charter High-Speed™ Internet, Charter iTV™, Charter OnDemand™ and Charter Telephone™.

In the launch of many of those services, Charter has led the cable industry. The Company's commitment to deploy video-on-demand in the summer of **2000** was, at that time, the largest in the history of the industry.

In the fall of **2001**, Charter launched a new interactive digital television service giving customers quick access to six virtual "i-channels" of news, weather, sports, entertainment, money and shopping information. Less than a year later, the Company launched i-Games, a channel of interactive games that customers played using their remotes.

Charter's launch of IP (Internet Protocol) telephony in August of **2002** in Wausau, Wis. was one of the earliest, if not the earliest, deployments of residential telephone service over a local broadband network.

In January of **2003**, Charter became the first cable company to carry HDNet, capitalizing on the early movement to high definition television with two round-the-clock HD channels.

Later that year, Charter became the first cable company to produce original content for video-on-demand, "Have Love Will Travel," a concert featuring Dan Aykroyd and Jim Belushi.

Charter spear-headed the movement to an all-digital environment with the January **2004** activation and the July commercial deployment of the cable industry's first all-digital network. That launch earned Charter's Long Beach, Calif. operation "System of the Year" designation by a leading industry publication.

Also in 2004, Charter was the first to commercially launch the Motorola Broadband Media Center with Digeo's Moxi™ Service advanced digital set-top that integrates high-definition television (HDTV) with a dual-tuner digital video recorder (DVR), providing the ability to watch one channel while recording another.

And in **2005**, yet another Charter system — Madison, Wis. — received "System of the Year" recognition from an industry publication.

Charter has entered into unique agreements with leading technology companies that will enable the Company to remain on the cutting edge into the foreseeable future. Being at the forefront is important to Charter, not for the sake of awards and peer recognition, but because it ultimately benefits Charter customers.

Charter's goal is to be the premier provider of in-home entertainment and communications in every market it serves. With a new initiative — Focus On Excellence — aimed at improved customer service, and continued technological leadership, that goal is a realistic one.
