

# SCTE

**The Society of Cable Telecommunications Engineers (SCTE)** is a non-profit professional membership association dedicated to advancing the careers of cable telecommunications engineering and technical professionals through excellence in professional development, information and standards.

## SCTE *Live* LEARNING™

More than 14,000 CTOs, engineers, system operations managers, technicians and field operations personnel from the U.S. and 70 countries worldwide depend upon SCTE to deliver the tools they need to maintain their competitive edge. SCTE has more than 70 chapters and meeting groups and has technically certified more than 3,000 employees in the cable telecommunications industry.

SCTE flagship events, SCTE's Conference on Emerging Technologies® and SCTE's Cable-Tec Expo®, help industry professionals stay abreast of developments in technology and the industry that may affect their careers and their companies operations today and into the future.

SCTE certifications enable individuals to demonstrate proficiency of technical knowledge relevant to their career and provide employers with an industry-recognized benchmark for technical expertise. SCTE is proud to be an Official Certification Partner of NCTI. In turn, NCTI, we are proud to say, is now an Official Training Partner of SCTE.

SCTE's award-winning Operación Español® provides a workforce development and diversity program targeted at expanding and accelerating professional development opportunities

for Spanish-speaking installers, technicians and engineers. SCTE's Supplier Diversity Connection at Cable-Tec Expo®, in partnership with the Walter Kaitz Foundation, is a special program aimed at opening up opportunities for women-and-minority-owned businesses interested in serving the engineering segment of cable.

In its 18th year of existence and 10th year of American National Standards Institute (ANSI) accreditation, the SCTE standards program is dedicated to providing standards to help the cable telecommunications industry prosper. With more than 135 members, the SCTE standards program is recognized by the International Telecommunication Union (ITU) and works in cooperation with the European Telecommunications Standards Institute (ETSI).

For \$58 a year, SCTE members receive valuable benefits such as exclusive discounts on premier industry events, discounted and free industry publications, free monthly web seminars, free access to SCTE InfoScope® — a qualified broadband search engine, leadership development opportunities, e-mail discussion groups, a membership directory, access to the speakers bureau, SCTE online bookstore and the online job bank — powered by BroadbandCareers.Com.

For more information on the Society of Cable Telecommunications Engineers and its programs, visit [www.scte.org](http://www.scte.org) and connect with a community of more than 14,000 engineering and technical professionals in the cable telecommunications industry.
